BANNERSAVER[™]

QUALITY THAT HAS NO COMPETITION

STATIC & BREAKAWAY BRACKETS

LOW-QUALITY MATERIAL

Some manufacturers use aluminum fillers that make brackets less dense and more prone to cracks and breakage.

SHORT WARRANTY LIFE

Longer warranties imply reliability for a longer period of time and show the manufacturer's commitment to stand behind the product.

WEAK ARMS

Cheap, fiberglass support-arms designed to "breakaway" in heavy winds result in banners that constantly need rehung or replaced from rips and tears.

BEWARE OF 'WIND HOLES'

Inferior brackets often recommend wind holes, slits, or "vented banners" that actually increase vibration, meaning more stress to light poles and banner fabric.
