

POST STORM CHECKLIST

Quick tips to help protect your light poles and prolong the life of your banners.

GROUND INSPECTION

Here's what to look for after a heavy storm:

BANNERS

- Check for tears and blown stitching
- Banners intact but hanging askew? See below.

BRACKETS & BANDING

- Check for loose or twisted banding
- Check for brackets that have slipped
- Check for broken clips and zip ties

**Retighten banding and/or replace any wind-damaged parts. Most major issues result from improper banding installation and lack of simple, preventative maintenance.*

PRO TIP #1

Be sure to have extra banding, clips & zip ties on hand ahead of the storm season. [Shop accessories.](#)

PRO TIP #2

If you have a pole banner program with frequent media changeouts, perform a quick visual inspection every time. See our blog [5 Best Practices For BannerSaver Maintenance.](#)

PRO TIP #3

If you have square poles, use heavy-duty banding only. It grips tighter than standard banding and helps ensure your brackets won't slip during a heavy storm. Shop [heavy-duty banding.](#)
