

# BANNERSAVER™

## QUALITY THAT HAS NO COMPETITION

### HEAVY-DUTY SPRINGS

Spills 87% of wind, reducing stress on light poles and banners

### BANNERS BUILT TO LAST

Vibrant 18-oz vinyl, double needle-lock stitching for extra toughness

### HIGH-QUALITY ALUMINUM

Bombproof cast construction, resists cracks and corrosion

### MULTI-SIZE VERSATILITY

Purpose-built and engineered to accommodate any size banners

### WIND-TUNNEL TESTED

Cuts light pole liability and boosts your banner ROI

### TIME-TESTED DESIGN

Reduces maintenance, service calls, and replacement banner costs

### 10-YEAR WARRANTY

Service and customer care that doesn't stop after the sale

## STATIC & BREAKAWAY BRACKETS

### LOW-QUALITY MATERIAL

Some manufacturers use aluminum fillers that make brackets less dense and more prone to cracks and breakage.

### SHORT WARRANTY LIFE

Longer warranties imply reliability for a longer period of time and show the manufacturer's commitment to stand behind the product.

### WEAK ARMS

Cheap, fiberglass support-arms designed to "breakaway" in heavy winds result in banners that constantly need rehanging or replaced from rips and tears.

### BEWARE OF 'WIND HOLES'

Inferior brackets often recommend wind holes, slits, or "vented banners" that actually increase vibration, meaning more stress to light poles and banner fabric.
