

### BANDING: STANDARD BANDING OR HEAVY BANDING?

There are many variables to consider when selecting your preferred banding type, Standard Banding or Heavy Banding. Factors you should consider are:

#### STANDARD BANDING

6 BANDS PER SET

- Also called Hose Clamp Banding.
- Fine for most installations with the BannerSaver Small or Medium.

#### HEAVY BANDING

4 BANDS PER SET

- Heavy Banding is required for the BannerSaver Large and XL but it is ideal for all jobs because they provide a tighter grip and reduce your maintenance costs over the long run (see section on Maintenance).
- Heavy Banding is recommended for most jobs with square poles regardless of banner size or BannerSaver model because it is sometimes difficult to get a good grip around four corners with Standard Banding.
- The higher profile of a banner program/campaign should also consider Heavy Banding.
- Custom cut/priced based on the diameter of your light pole.
- Requires banding tool.
